

Project Design Phase

Proposed Solution Template

Date	18 June 2026
Name	JAMPA KAILASH JOHNITH
Project Name	Shop EZ
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Students and small businesses lack an affordable, easy to deploy e-commerce platform. Existing solutions are either too complex, expensive, or fail to provide educational value for college-level learners seeking to develop real-world full-stack development skills.
2.	Idea / Solution description	A lightweight, modular e-commerce platform designed for learning and small-scale deployment. Features include product catalog, cart, checkout, payment integration, and admin dashboard—built with clean, documented code that serves as both a functional store and a teaching tool for full-stack development.
3.	Novelty / Uniqueness	Combines functional e-commerce with educational architecture. Code is structured with inline documentation, modular components, and best practices, allowing students to learn while building. Unlike Shopify or WooCommerce, it prioritizes transparency and learning over abstraction.
4.	Social Impact / Customer Satisfaction	Empowers students to gain employable skills through hands-on project experience. Enables small businesses and entrepreneurs to launch online stores without high

		costs. Bridges the gap between academic learning and industry-ready development.
5.	Business Model (Revenue Model)	Freemium model: core platform free and open-source. Revenue through premium templates, hosting partnerships, certification courses, and enterprise support/customization services.
6.	Scalability of the Solution	Cloud-native architecture allows horizontal scaling. Can be deployed on low-cost hosting for learners or scaled to handle higher traffic for growing businesses. Modular design supports adding features (inventory, analytics, multi-vendor) as needs grow.
